Special Issue on Modelling for Learning

1 Foreword, Modelling to predict or to learn?
A.P. de Geus
6 Introduction and background
J.D.W. Morecroft
9 Executive knowledge, models and learning
J.D.W. Morecroft
28 Model-building for group decision support: Issues and alternatives in knowledge elicitation
J.A.M. Vennix, D.F. Andersen, G.P. Richardson and J. Rohrbaugh
42 Policies, decisions and information sources for modeling
J.W. Forrester
64 Modelling as Learning: A consultancy methodology for enhancing learning in management teams
D.C. Lane
85 Knowledge elicitation in conceptual model building: A case study in modeling a regional Dutch health care system
J.A.M. Vennix and J.W. Gubbels
102 Modelling the oil producers – Capturing oil industry knowledge in a behavioural simulation model
J.D.W. Morecroft and K.A.J.M. van der Heijden
123 The definition and application of a stepwise approach to model conceptualisation and analysis
E.F. Wolstenholme
137 Systems thinking and organizational learning: Acting locally and thinking globally in the organization of the future
P.M. Senge and J.D. Sterman
151 Model-supported case studies for management education
A.K. Graham, J.D.W. Morecroft, P.M. Senge and J.D. Sterman
167 Experimentation in learning organizations: A management flight simulator approach
B. Bakken, J. Gould and D. Kim
183 Overcoming limits to learning in computer-based learning environments
W. Isaacs and P.M. Senge
197 Software for model-building and simulation: An illustration of design philosophy
S. Peterson
203 The system dynamics modelling process and DYSMAP2
B. Dangerfield
210 Participatory simulation software for managers: The design philosophy behind MicroWorld Creator
E.W. Diehl
216 Understanding models with Vensim™
R.L. Eberlein and D.W. Peterson
220 Hexagons for systems thinking
A.M. Hodgson

231 The Traveling Salesman Problem: An overview of exact and approximate algorithms (*Invited Review*)
G. Laporte
248 Multicriteria analysis of the burden sharing in the European Community
L. Hens, H. Pastijn and W. Struys
262 Human migration networks
A. Nagurney, J. Pan and L. Zhao
275 A game-theoretic model for mergers and acquisitions
R.C. van den Honert and T.J. Stewart
288 Economic investment times for capacity expansion problems
J.L. Higle and C.J. Corrado
294 Optimal partitions for shop floor control in semiconductor wafer fabrication
P.K. Johri
298 Single-machine sequencing with controllable processing times
S.S. Panwalkar and R. Rajagopalan
303 The G/G/1 (LCFS/P) queue with service depending on queue size
D. Fakinos

0377-2217/92/$05.00 © 1992 – Elsevier Science Publishers B.V. All rights reserved

308 A generalized optimization strategy for dynamic CO_2 enrichment in a greenhouse
Z.S. Chalabi
313 An optimal algorithm for integrating raw materials inventory in a single-product manufacturing system
J.-D. Hong and J.C. Hayya
319 Prioritization models for frontier decision making units in DEA
W.D. Cook, M. Kress and L.M. Seiford
324 On the optimal entropy analysis
H.S.J. Tsao, S.C. Fang and D.N. Lee
330 Application of a measure of proximity to fuzzy control algorithms
C.P. Pappis
333 A note on sequencing jobs with deadlines problem
K. Dudziński and K. Szkatuła
337 A note on modeling internal technological externalities in linear profit programs
M.J. Panik
340 Correction to an article of Gavish and Pirkul
J. Sommerschuh
342 OR Software, *H. Tiriez (ed.)*

345 The Vehicle Routing Problem: An overview of exact and approximate algorithms (*Invited Review*)
G. Laporte
359 Many steps towards zero inventory
H.J. Grünwald and L. Fortuin
370 Optimal ordering policies when anticipating a disruption in supply or demand
H.J. Weiss and E.C. Rosenthal
383 Analysis of net inventory in continuous review models with random lead time
K.S. Azoury and P.H. Brill
393 Lot-sizing algorithm for a coordinated multi-item, multi-source distribution problem
P. Iyogun
405 Analysis and comparison of two strategies for multi-item inventory systems with joint replenishment costs
M.J.G. van Eijs, R.M.J. Heuts and J.P.C. Kleijnen
413 A comparison of two lot sizing-sequencing heuristics for the process industry
R.M.J. Heuts, H.P. Seidel and W.J. Selen
425 An algorithm based on a new sufficient condition of optimality in dynamic lot size model
M.-B.Q. Aryanezhad
434 The EOQ model with stochastic demand and discounting
H.-p. Chao
444 Capacitated lot-sizing and scheduling by Lagrangean relaxation
M. Diaby, H.C. Bahl, M.H. Karwan and S. Zionts
459 Contents Volume 59
